Protect YOUR data now before
the inevitable happens!!

WHAT IF YOU LOST YOUR COMPUTER DUE TO FIRE OR THEFT??

Think about your computer and what data it holds. How long did it take for you to create all that data, years perhaps. Imagine someone coming in and taking it away, never to be seen again or perhaps being lost in a fire. What do you do??

Maybe you have insurance, which you probably should. Most of us insure our office furnishings and computers, **why not insure the most important part of any business, your data?** I am sure the Insurance Company will give you a cash payout for a new computer, but where do you start with the data re-creation. This can be a very traumatic event for even the hardiest of us.

With Analogix Remote Backup, the solution is simple. Just install Analogix Remote Backup on a replacement PC and copy your data back from our Servers, it's that easy!! No other back up solution can offer this speed or reliability; the choice is **simple**. **Start protecting your data NOW with a FREE 14 day trial by clicking [HERE](#).**

IS YOUR DATA PROTECTED AGAINST THE FOLLOWING??

Fire and or Smoke Damage, Water Damage, Electrical/Lightening Spikes, Brownouts or Blackouts, Theft or Human Error, PC or Hard Drive failure, Virus destruction of data, Accidental deletion of files, Lost or damaged laptop, Backups corrupted

LET'S LOOK AT TYPICAL DATA TYPES AND POSSIBLE LOSSES

Word/Excel Documents, Outlook Files/Address/Book/Emails etc, Private Information, Pictures, Marketing, Material/Presentations, Legal Documents, Accounting Data, Financial Data, Banking Details etc, SQL Database Files

A BRIEF OUTLINE OF ANALOGIX REMOTE BACKUP

Analogix Remote Backup sends your backups over the Internet to an online backup server safely offsite. This is usually done of a night while your computers are not being used. This is a completely automated process, you won't even know it's happening.

The majority of businesses don't do regular back ups. This is usually because the person responsible for doing backups gets sidetracked on something else, or someone is using the computer when it's time for a backup, or maybe they just forget. With Analogix Remote Backup, backups are always done on schedule.

Unlike other back up software, Analogix Remote Backup constantly scans the computer system and adds files to the backup sets as they are created. **Several full copies of files are stored using a sophisticated version control system unavailable in most other backup software of any kind.** A true backup should save multiple copies of the same files at different points in their cycle; these are called versions. The majority of large corporations, including Banks perform this style of backup, and so should YOU!!

Analogix Online Backups are encrypted to ensure total security. Traditional backup systems don't generally encrypt the data, so anyone clever enough can access your data, even on a backup tape drive or mass storage device. You can rest easy knowing that your data is immediately sent offsite and stored safely away from prying eyes, or worse still total destruction or theft. I have been in this business for a long time and have found that most small companies leave the tapes or external hard drives in the office with the computer, where they can be destroyed along with the computer.

Insure your data from as little as \$2.00 per day, act now before it's too late!!

All backups are monitored by skilled staff to make sure YOUR backups are carried out successfully every day!!

IN SUMMARY

- ⊕ The whole backup procedure is automated
- ⊕ Your data is password protected
- ⊕ Your data is securely encrypted
- ⊕ There are always 4 copies of your data backups in separate locations
- ⊕ Your data is stored off site
- ⊕ Your data is archived
- ⊕ Your data is easily retrieved
- ⊕ Cost efficient
- ⊕ Compatible with all Windows platforms
- ⊕ No hardware upgrades required
